

WHAT IS CLAIMED IS:

Sub  
Al  
1. An organic EL circuit comprising:

a plurality of pixels, each pixel having a plurality of driving  
5 transistors which are switched on and off based on data from a  
plurality of data lines and a plurality of organic EL elements each  
of which is provided to correspond to each of said plurality of  
driving transistors, wherein

the transistor size of each of said driving transistors differs  
10 from that of the other driving transistors; and

gray scale display is effected by controlling the number of  
transistors to be switched on in order to vary the number of EL  
elements which are switched on in each pixel and thereby control  
the amount of light emitted by each pixel.

15 2. An organic EL circuit according to claim 1, wherein the sizes  
of the plurality of driving transistors are set so that the sizes  
are sequentially doubled.

20 3. An organic EL circuit according to claim 1, wherein the size  
of the transistor is determined by the gate length and/or gate width  
of the transistor.

25 4. An organic EL circuit according to claim 1, wherein the light  
emission areas of said plurality of EL elements within one pixel  
are varied.

5. An organic EL circuit according to claim 4, wherein the light  
emission area of the EL element connected to the larger driving

transistor is increased.

6. An organic EL circuit according to claim 1, wherein  
the driving period of the driving transistor of each pixel  
5 is divided into a plurality of sub-fields; and  
the duration of ON condition of each EL element is controlled  
by controlling the on/off condition in each sub-field.

7. An organic EL circuit according to claim 6, wherein the lengths  
10 of said plurality of sub-fields are set so that they are sequentially  
doubled.
